Make a Hexaflexagon!

A Hexaflexagon is a 'magic' mathematical shape that you can keep flipping inside out to reveal hidden pictures. Cut out the shapes and have a go - can you find all 6 images?

Step 1

Cut out the small template, or cut out and join the 3 pieces to make the big one. Then, fold it down the middle along the red line

Step 2

With 'G1' facing up, fold forward on each of these red lines in turn

Step 3

You should end up with shape that looks like this...

Step 4

With the 'back' facing you, fold along this line, folding side 'A' behind side 'B'

Step 5

Fold along this line, folding side 'B' over side 'A'

Step 6

Bring 'G1' out from behind so it sits in front, then fold and stick 'G2' on to 'G1'

How to use it

Pinch any corner together... ..push the opposite corner in and back

Until you have a 3-point star... ..and you can see a new image inside

Then 'peel' open the middle of the star... ..to reveal the new image
